

Pulverizers

IFP - Fixed

IRP - Rotating

IFP fixed and IRP rotating pulverizers

Exploiting the best in Indeco's advanced technological know how, the Indeco IFP fixed and IRP rotating pulverizers were designed and created following the top quality guidelines already used in manufacturing our famous hydraulic breakers. By using the latest technologically advanced materials, such as special extra-strength HARDOX® alloy steel, Indeco pulverizers are specifically designed to withstand high levels of pressure, wear and abrasion, and prolonged use regardless of jobsite conditions. IRP rotating pulverizers are perfect not only for the primary demolition of buildings, vertical structures, flooring, slabs and external walls. The IFP fixed versions are perfect for the secondary demolition of reinforced concrete materials and structures, and for recycling after separating the concrete from the steel rods. The unique shape of Indeco pulverizers is a design feature created specifically to reduce the variation in the force required between the start (maximum opening) and the finish (minimum opening) so as to increase efficiency and continuity, and to reduce both working times and stress transmitted to the excavator. The hydraulic system is equipped with a "regeneration valve" which enables the mobile jaw to be closed more quickly under no-load conditions, in order to apply all of the force available only when pulverising material, thus increasing productivity. Other key features which keep Indeco pulverizers efficient in the long term: the adjustability of the distance between the cutters located inside the jaws, so that steel rods inside reinforced concrete can be cut more efficiently; the interchangeable teeth on the mobile jaw (welded onto a bolt-on plate and secured with special latches) for optimal penetration of the material being demolished.

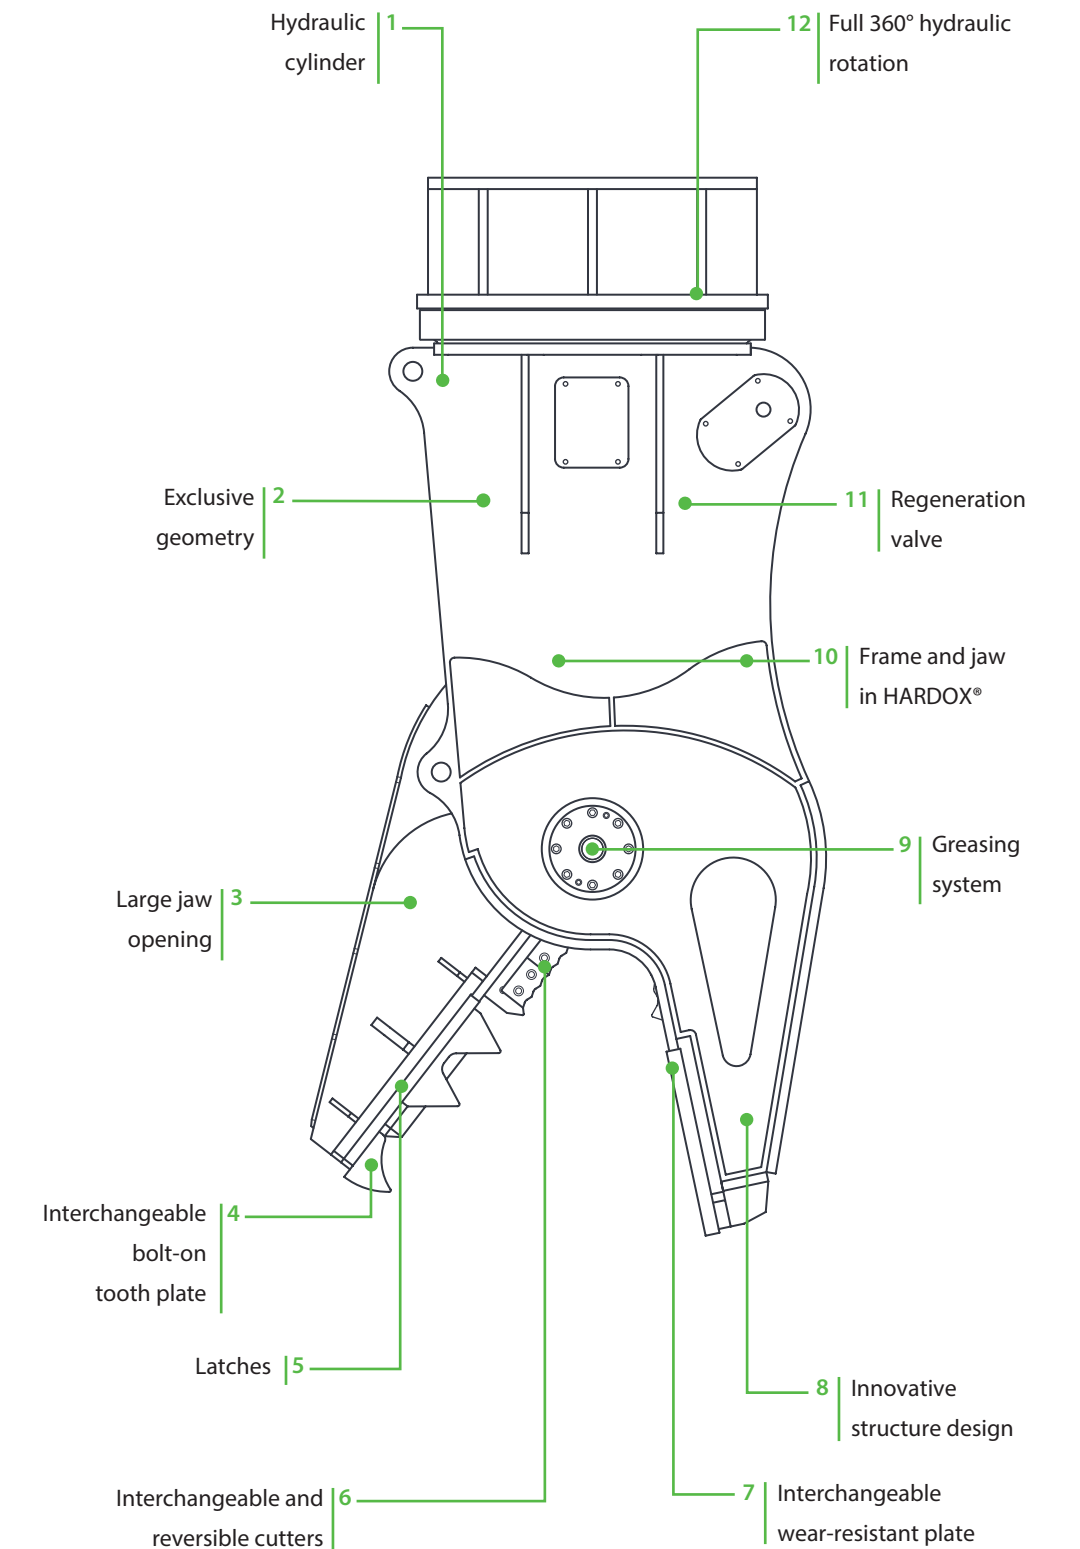

Features of Indeco pulverizers

The hydraulic cylinder **|1|** position protects the rod. The exclusive geometry **|2|** guarantees maximum consistency of the pulverising force between the maximum and minimum opening of the jaws **|3|**. The interchangeable teeth **|4|** are mounted on a bolt-on tooth plate, secured with special latches **|5|**. The adjustability of the distance between the cutters **|6|** positioned inside the jaws makes it more efficient to cut reinforcing rods; the cutters are interchangeable and can be used on both sides. The insertion of the interchangeable wear-resistant plate **|7|** also in the fixed jaw preserves the bearing structure of the pulveriser during heavy and prolonged use. The structure is very rigid to prevent buckling; the innovative design **|8|** improves grip and makes the equipment easier to handle. The centralised greasing system **|9|** improves the lubrication of moving mechanical parts. The frame and jaw **|10|** are made of HARDOX®. The regeneration valve **|11|** makes it so that the movable jaw closes faster under no-load conditions. The full 360° hydraulic rotation **|12|** with protection valve ensures optimal grip of the material and a better demolition in all logistic conditions.

IFP fixed

Compatibility

Suggested uses on machines with an overall weight (in ton):

Accessories

Indeconnect system

New remote monitoring system, based on the principles of the Internet of Things, to prevent equipment obsolescence and keep high performance. The 'Indeconnect' system consists of a **device** equipped with 4G technology for a wireless connection to the network, to be mounted on the equipment, and a cloud-based **web platform** you can access from mobile devices (with an app) or from PC, that lets you view the data transmitted in real time by each installed device: working hours, working position in space, hydraulic oil temperature, ambient temperature, GPS position, and more.

Through Indeconnect you can:

- **Monitor productivity**, making sure each Indeco tool is working as intended
- **Check operations**, verifying in real time the various internal and external parameters of the equipment to make sure that it is used in optimal conditions and correctly
- **Increase security**, by remotely checking the position of the equipment through GPS
- **Plan maintenance**, monitoring the health of each Indeco tool in real time, also through the automatic alert and messaging system that lets you order spare parts and reduce machine downtime to a minimum
- **Optimise rental**, by supervising and monitoring the management of rented equipment.
